

1 (a)

$S = \text{database\$}$

$\text{BWT}(S) = \text{et}$

<https://eduassistpro.github.io/>

(please include some [Add WeChat edu_assist_pro](#) your solution)

1 (b)

During exam, the initial values of the alphabets are less important. For this qn, after MTF, the last two a's should be 2, 0.

3

- `/bib//book[year > 2000]/author` always produces a subset of the result from `/bib[*//year > 2000]//book/author`
- As the latter can match more general cases, for example `/bib//last-updated/year` may contain the last update date of the entire bib database, which includes all the books.

4(a)

The idea:

Your answer should consider the encoding of the XML tree into the balanced parentheses / bits:

(((000))((000))((0)))

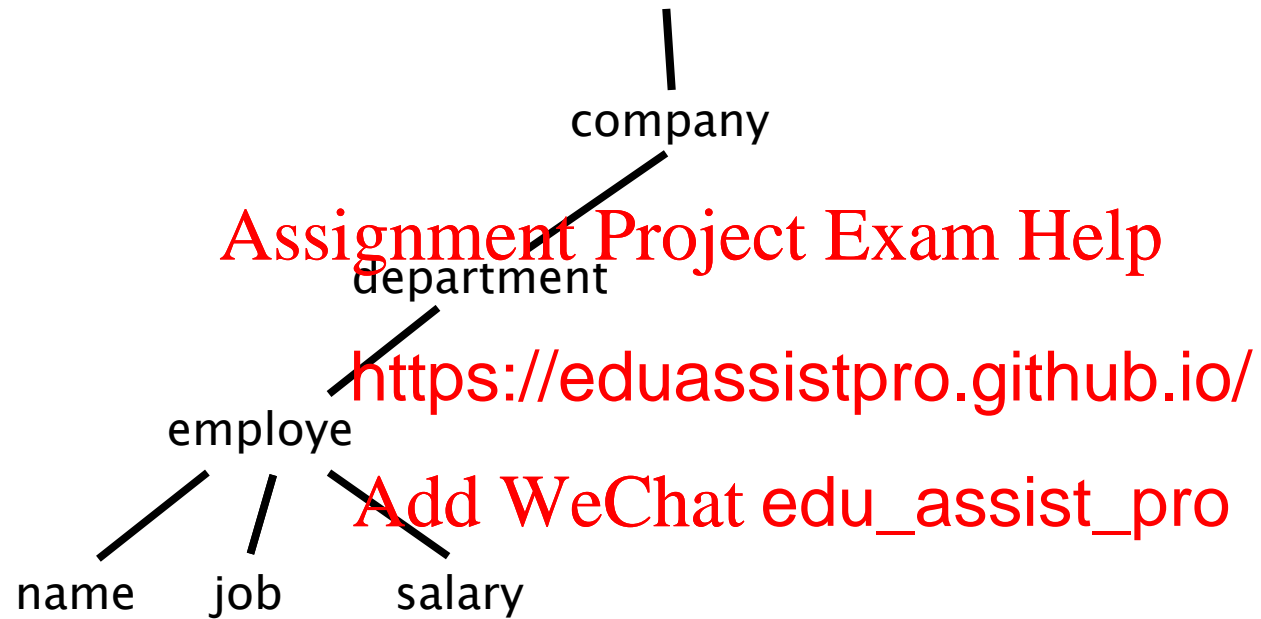

You will then need to assume these parentheses are stored in blocks and explain how much space in ISX can efficiently compute

5

Use an example to illustrate how to match a sub-path on the following XBW (for simplicity, the text values are not shown here):

6

Start	Stop
Site1	
(x1,s1)	(y1,s3)
(x4,s3)	(y3,s4)
Site2	
(y1,s2)	(z2,s3)
(y1,s3)	(z2,s3)
(y3,s2)	(z2,s3)
(y3,s3)	(z2,s3)
Site3	
(z2,s2)	(x4,s3)
(z2,s3)	(x4,s3)

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

(x4,s3) x3

Site2

(y1,s4) y1

(y1,s2) y3

(y1,s3) y3

(y3,s4) y3

Site3

(z2,s1) z3

(z2,s4) z2

(z2,s2) z2

(z2,s3) z2

Facing these
ables from
(x1, s1), we
obtain the final
results:
y3, z2, x3, y3
